Faculty of Electrical Engineering Sarajevo	*2017 – Present*

WORK EXPERIENCE

Infobip Software Engineer Intern	*04.07.2022 – 02.09.2022.*

PROJECTS

Tomcat: Front-end, Back-end

Tomcat social network web application is a platform that allows users to connect and share content with other Tomcat users. Users can publish text posts, comment and like other users posts, follow favorite users and receive notifications. The application uses the Spring Boot framework for back-end development and the React JavaScript framework for the front-end, which enables fast and efficient development and an interactive user experience.

DiscordBot

DiscordBot application is built using the Spring Boot framework and is useful for radio lovers that allows them to listen "Radio Miljacka" radio station directly through the Discord platform.

eDnevnik

The application allows teachers to plan and organize lesson topics, and to enter notes about each lesson. It also allows monitoring of student attendance in classes, and entering and reviewing student grades. The app also has a student management option, where the teacher can view each student's data and track their progress. Documents and assignments can be easily added through the application, which makes the teacher's work easier.

RSS feed | Arm Mbed OS Simulator

The application shows the latest titles from the Klix.ba portal on the display of the Mbed simulator. The project uses RSS technology for reading and parsing data from the Klix.ba portal and the Mbed simulator for displaying data on the display.

Gridshot

Gridshot is a mini-game written in the JavaScript programming language that allows training and improving accuracy, player mouse movements and eye movement in gun games. The game is useful for players who want to improve their performance in FPS and TPS games.

Sarajevo City Hall
